Note: In accordance with came into effect to the new international statistical code on foreign trade such as export and import which decided at Brussel's conference. Japan's export statistical classification was changed from the date of 1962.

Note: (cont.)

Therefore, the classification between 1962 and 1961 is some different in all commodities. Especially, the classification of salmon in 1962 and 1961 is much different. It is attributable to the single classification of salmon in 1962 and the specific classification by species in 1961 because of the consideration of influence on Japan-Soviet Union fishery negotiation by the Japanese Government. As a result, the data on Japan's salmon export since 1962 is shown only single classification of salmon.
